About this guide

This guide is designed to help you understand your PDF and CSV invoice, which are sent out monthly, and how to pay your bill.

Extra reading

For general information, see the online help: <https://docs.eseye.com/Content/Home.htm>

You can also manage your SIM estate and account through the SIAM web portal. For more information, see the [8295 SIAM User Guide \(PDF\)](#).

Standards and conventions

This guide uses consistent visual cues and standard text styles to help you locate and interpret information easily.

Style	Description
 Note	Extra information or a recommendation related to the current topic.
 Tip	Good-to-know information that helps users complete a procedure or understand a topic.
 Warning	Information that alerts the user about significant or critical actions or outcomes.

<i>Title names</i>	Window or section names, denoting a title, appear in italics.
Field or button name	Element names in a user interface, for example fields and buttons, appear in bold.
Ctrl+X; Ctrl+click	A key combination with a plus sign separating two key names or a key name and a mouse action, indicates that you hold down the first key while pressing the second key or performing the mouse action.
Cross reference <i>Title</i> and page	Cross references appear in italics, for example: For more information, see <i>Copyright</i> on page ii. Select the cross reference to view it.
Hyperlinks	Underlined cross references are hyperlinks to electronic forms of the document. Select the hyperlink to open the cross reference.
AT Commands	
Commands	Command formats are displayed in monospaced typeface.
<Parameter>	Angle brackets enclose the AT Command parameter, for example <topic>. The brackets do not appear in the command line.
"ParameterString"	Quotation marks enclose parameter strings.
<i>CommandValue</i>	Italics in a command depicts values or examples that need replacing with your specific parameters.
[CommandOptionalEntry]	Square brackets display optional entries.
ATCommandResponse	Returned responses to AT Commands are displayed in monospaced bold typeface.
<ASCIICHARACTERS>	Returned ASCII characters are in uppercase.

About Billing

Eseye has a complex billing system that calculates the charges for each customer's SIM estate. Each customer has a unique set of Service Contracts that defines the packages provided to them and the costs involved, which are tailored to their exact requirements. This document describes some of the more complex billing options that are available, and how these are calculated.

Eseye standard terms and conditions

You can view the latest billing terms and conditions here: [Standard Terms and Conditions](#) (downloads a PDF).

Viewing an invoice

Eseye invoices are sent via email. If you have not received an invoice, ensure your *Billing Contact Details* are correct in Infinity Classic.

For more information, see *Editing your Infinity Classic contact details* on page 5.

To view an invoice:

1. Log in to Infinity Classic: <https://siam3.eseye.com/user/login>
2. Select **Finance > Transactions**.

Account transactions are listed in chronological order, with the most recent transaction first.

3. Expand the number of results returned to 100 per page.

4. In the *Type* column, locate the relevant *Invoice*.
5. Alongside the *Invoice*, in the *Actions* column, select any of the following icons to view the file:

	Download the invoice for viewing in your default PDF application.
	Open the invoice in your browser window for printing without downloading it.
	Download a detailed CSV file, containing a cost breakdown.
	Download an XML invoice.
	Immediately email the invoice to yourself as an attached PDF.

See the back of this guide for detailed examples of the PDF and CSV invoices. For examples of the PDF and CSV invoices, see [PDF Invoice Example.pdf](#) or [CSV Invoice Example.pdf](#).

Making a payment

You can pay Eseye using the following methods through the Infinity Classic portal:

- Direct Debit – for UK customers with bills under £2000
- Bank to bank transfer (BACS payment)
- Debit or credit card, with the option for repeat monthly billing
- PayPal

Setting up a Direct Debit payment

Only for UK customers with bills under £2000. Notice is given ten days in advance. Payment is usually collected a month in arrears.

To set up a direct debit:

1. Log in to Infinity Classic: <https://siam3.eseye.com/user/login>
2. Select **Finance > Overview** to view the *Finance overview* page.
3. Under *Finance settings*, alongside *Payment method*, select .

The Payment Settings Change Request dialog box appears.
4. Select the **Direct Debit(Monthly)** option.
5. Select **Request change**.

The Direct Debit Setup Request form appears.
6. Select  to download the *DDI MANDATE NEW.doc* form.

7. Complete the form details, then save the form.
8. Select **Choose file** to browse and select the saved form.
9. Select **Open** to attach the form to the Direct Debit Setup Request.
10. Select **Upload Form** to send the form to Eseye.

If the upload is successful, a Direct Debit Request Sent Successfully message appears in the Payment Settings Change Request window.

If the upload is not successful, contact Support: support@eseye.com.

11. Eseye will send you an email confirming that the direct debit is set up.

Making a BACS payment

1. Log in to Infinity Classic: <https://siam3.eseye.com/user/login>
2. View a PDF invoice to find the Eseye BACS Payment Details.

For more information, see *Viewing an invoice* on page 1.

3. Set up the payment using your bank account.
4. Notify Eseye that you have paid the bill using a BACS payment: accounts@eseye.com.

Include the following information in your email: invoice number as a payment reference, as well as the amount paid.

Paying with Paypal or a debit or credit card

Eseye accepts payments from:

- VISA Credit, VISA Debit, VISA Electron
- Debit Mastercard, Mastercard
- Paypal

After you complete an initial credit or debit card payment, Eseye offers a recurring payment service.

Before you begin

You will need:

- Purchase Order number
- Debit or Credit card, unless you are using Paypal

To pay the outstanding bill:

1. Log in to Infinity Classic: <https://siam3.eseye.com/user/login>
2. Select **Finance > Overview** to view the *Finance overview* page.
3. If you want to pay an amount, then select **Make payment by Credit Card** alongside either of the following amounts:

Amount due – overdue amount. You owe this immediately.

Account balance – total amount owed, including the overdue amount.

Statement	Amount	Actions
Amount due	£ 13260	Make payment by Credit Card
Account balance	£ 56397.78	Make payment by Credit Card
		Make Ad-hoc Payment By Credit Card

The shopping cart appears, with the amount listed.

4. Alternatively, if you want to pay a specific amount, enter the required amount in the *Amount* field, then select **Make Ad-hoc Payment By Credit Card**.

Statement	Amount	Actions
Amount due	£ 13260	Make payment by Credit Card
Account balance	£ 56397.78	Make payment by Credit Card
	10000	Make Ad-hoc Payment By Credit Card

The shopping cart appears, with the specified amount listed.

5. Select **Checkout**.
6. On the *Billing Address* tab, ensure the Billing Address is correct.
7. If you need to change the billing address details, select **Edit this address**.

8. Select **Next Step** to view the *Options* tab.
9. Type a mandatory *Order Summary* to help you identify this order.
10. Type a mandatory *PO Number* to reference your Purchase Order.
11. Type *Additional Notes*.
12. Select **Next Step** to view the *Review Cart* tab.
13. Review the payment, then select **Make Payment**.

The Sage Pay - Payment Selection window appears.

14. Select Paypal or your payment card provider.
15. If required, enter your debit or credit card details.
You may be required to authenticate your card.
16. Complete the payment.
17. If the payment fails, check that your Infinity Classic contact details are correct.

For more information, see *Editing your Infinity Classic contact details* below.

If you have any problems, contact Accounts: accounts@eseye.com

Editing your Infinity Classic contact details

If you have not received an invoice, or you cannot process a payment, check that your contact details are correct in Infinity Classic.

To check your contact details:

1. Log in to Infinity Classic: <https://siam3.eseye.com/user/login>
2. Select **Finance > Details** to view the *Finance details* page.
3. If you need to edit the details, select **Edit**.

The Update Finance Details page appears.

4. Make your changes, then select **Save**.

If your contact details are correct and you are having problems processing a payment or receiving invoices, contact Accounts: accounts@eseye.com

Understanding the SIM lifecycle

SIMs in normal operation go through a lifecycle. As they transition between states, the charges can vary. The states in Infinity use different terminology to those exposed in the APIs:

Before a customer can use a SIM, they must purchase the SIM hardware and sign a service contract, agreeing to the associated costs.

When all agreed payments are made, the SIM belongs to the customer. Eseye prepares the SIMs for shipping, which includes linking each SIM to a customer account and assigning a [package](#) to each SIM. The security and identity information for each bootstrap profile IMSI (on a multi-IMSI SIM) is preconfigured on the SIM during factory manufacture.

Any associated charges start when the SIM becomes *Active* (also known as *provisioned*).

Depending on the platform you are working with, you may see any of the following Infinity states or API statuses:

Infinity State	Tigrillo API Status	Description
<i>available</i>	<i>available</i>	The SIM or IMSI (for multi-IMSI SIMs) exists on a customer account and is assigned a package. No

Infinity State	Tigrillo API Status	Description
		charges are incurred. The customer must request to activate the SIM for use. The SIM cannot connect to a network in this state.
<i>pendingProvision</i>	<i>pendingProvision</i>	The SIM or IMSI (for multi-IMSI SIMs) undergoes provisioning, which may take a while to complete. During this process on an Operational (Step 2) Profile (for eUICC SIMs), the security and identity information is downloaded and programmed into the SIM. Customers can process up to 5000 SIM activations at one time using Infinity Classic. There are no limitations within the API.
<i>active</i>	<i>provisioned</i>	The SIM or IMSI (for multi-IMSI SIMs) is ready for use – it is fully authenticated by the HLR and active on the network. The SIM or IMSI is charged at standard service charge rates, and for any usage. For SIM API, if you deactivate an <i>active</i> SIM, it returns to an <i>available</i> state.
<i>suspended</i>	<i>suspended</i>	Both Eseye and the customer can temporarily disable SIM functionality using either Eseye or customer-configured rules. At this point, the SIM is able to connect to a network, although all services are disabled. While this process closes all data sessions, standard rate service charges continue. You cannot suspend an IMSI. Eseye suspends SIMs for non-payment, or to protect against security alerts or potential abuse issues. When Eseye suspends a SIM, the customer cannot reactivate it. Customers may suspend their SIM for the following reasons: • To prevent unauthorised usage if the device is lost or stolen • They want to move the SIM to a different device, but not immediately • They are not using the device for a significant period of time, but want to maintain the current contract for that device

Infinity State	Tigrillo API Status	Description
		Customers can reactivate their suspended SIMs.
<i>pendingTermination</i>	<i>pendingDeprovision</i>	Eseye or the customer have requested termination (also known as deprovisioning), which will prevent the SIM or IMSI (on a multi-IMSI SIM) accessing network services and incurring subsequent usage charges. Termination is processed by Support, and is not instant.  If the SIM is in contract, the customer is liable for the rest of the service charges up until the end date of the contract. If charges are owed, the customer is sent a separate termination invoice. For multi-IMSI SIMs, you can terminate an individual IMSI without terminating all the IMSIs on the SIM. For example, if the multi-IMSI SIM has O2, Manx and MTN IMSIs, you can terminate O2 but maintain active Manx and MTN IMSIs. Customers can process up to 5000 SIM terminations at one time using Infinity Classic. There are no limitations within the API. We request that before you terminate more than 5000 SIMs, you provide at least 24 hours' notice to Support so that we can help you manage the process. Eseye may terminate a SIM for the following reasons: • If the SIM is unused for a long period of time • If the SIM is used outside of the terms of the service contract • The SIM is broken • If the customer account is in arrears Customers may terminate their SIM for the following reasons: • They are leaving Eseye • The SIM or device is written off as lost or stolen

Infinity State	Tigrillo API Status	Description
		• The device is obsolete or destroyed • Their customer no longer wants service • Their customer stopped paying the bill For more information, see Standard Terms and Conditions (downloads a PDF).
<i>terminated</i>	<i>unprovisioned</i>	The SIM or IMSI (for multi-IMSI SIMs) is deprovisioned. The SIM stops connecting to the network and nobody can use the SIM. Service charges stop. The physical SIM and its associated numbers remain the property of the customer for an extended period. After this, the number will revert to the pool of numbers that belongs to Eseye and the physical SIM will need replacing if the customer wants to reuse the device. For multi-IMSI SIMs, when all IMSIs that exist on the SIM are deprovisioned, then the SIM is terminated. It is possible to terminate (deprovision) an IMSI but have other active (provisioned) IMSIs on the same SIM. In this case, the SIM is not terminated.

Understanding Service Contracts and packages

About Service Contracts

Service Contracts describe the agreed commercial contract between Eseye and the customer, including:

- Where the SIMs will be deployed
- Services available – SMS and data

Voice is no longer offered, as it is not required for M2M communication. Voice is included in this document for legacy reasons.

- SIM purchase price
- SIM activation charge
- Billing and rating
- Bundles
- Billing currency – Eseye does not support mixed currency billing within a portfolio account
If you need multiple currency billing, you must set up a new portfolio account and a new Service Contract per currency. After a portfolio account is set up, you cannot change its currency.
- Contract length – describes the minimum contract term
When the contract length lapses, SIMs are not automatically terminated, and service will continue on a rolling monthly contract. An active SIM will continue to accrue charges.
- Customer notes

For information about setting up one or more Service Contracts on your Eseye SIM estate, speak to your Account Manager. Eseye will set up a package for you.

About packages

A package contains the information required for Eseye to supply, provision and operate SIMs for a customer. It defines commercial data (such as the tariff and billing terms), the available SIM services (such as data, voice, SMS), and the technical provisioning data that is used to activate and operate SIMs.

About package items

Your invoice details various package items and the price of consuming those services in a particular country.

SIM usage is charged monthly in arrears for both monthly and annual service charge intervals.

Package items may include:

- Service charges. For more information, see *About service charges* on the next page.
- SMS, data, and voice billing. For more information, see *SMS, data, and voice billing* on page 17.
 - Bundled usage. For more information, see *Understanding bundled usage* on page 20.
 - Pooling. For more information, see *Understanding pooling* on page 21.
- Activation charges. For more information, see *About activation charges* on the next page.

Mobile Network Operator (MNO) billing

If MNOs send out their invoices after the Eseye billing date, then these charges are deferred until the next monthly invoice.

SIM purchase price

The cost of purchasing Eseye SIMs is either:

- Amortised into the service charge
- Charged as a component charge when you buy the Eseye SIM

If the cost is charged as a component charge, you are billed once on a separate hardware invoice, rather than on the monthly service invoice.

Understanding invoice charges

About activation charges

Eseye may apply a charge when a SIM is first activated.

This charge may cover the cost of the SIM, or provide an initial testing period. Speak to your Account Manager for more information.

About service charges

Customers are billed for their out-of-bundle SIM usage every month, as well as a service charge per active SIM.

Service charges cover the following:

- Active subscription on the mobile network

Suspended SIMs are active SIMs.

- Any bundled usage

About post pay monthly billing charges

Customers using post pay billing are billed in arrears for out-of-bundle SIM usage and service charges for each SIM with an **active** status at the end of a month.

A newly activated SIM incurs a partial service charge from the day the SIM is activated for the number of days the SIM is active.

Post pay monthly billing

If you terminate a SIM part way through the month, the SIM incurs a partial service charge for the number of days it was active during that month, and is billed in arrears on the following invoice. For more information, see *About SIM termination fees* on page 16.

About prepay monthly billing charges

For customers using the historic prepay billing system, each SIM with an **active** status on the account is billed a service charge a month in advance. A newly activated SIM incurs a partial service charge from the day the SIM is activated for the number of days the SIM is active. This is billed in arrears on the first invoice, in addition to the monthly service charge in advance for the following month. Out-of-bundle SIM usage charges are charged in arrears.

Prepay monthly billing

If you terminate a SIM part way through a month, there is no refund for the service charge that you have already paid for that SIM. For more information, see *About SIM termination fees* on page 16.

About prepay annual billing service charges

You pay service charges as a lump sum annually when you activate a SIM on an annual Service Contract. Service renewal then occurs on the anniversary of activation for each SIM.

Customers who pay annual service charges for their SIMs will receive monthly bills, which include:

- The amount of out-of-bundle services used in the last month
- The annual service charge for each SIM that was activated during the past month
- Advance service charge renewal for each SIM approaching its activation anniversary within the next month

For example:

A SIM activated on 10/03/2021 is billed for service charges from the 10/03/2021 through to the 09/03/2022 on the 01/04/2021 invoice. The 01/05/2021 invoice includes the SIM's usage for the month of April, but no service charges as these are already billed. The following year, the annual service charge renewal for that SIM will appear on the 01/03/2022 bill, and the renewed service will start on the 10/03/2022.

Prepay annual service charge

Adjusting invoices for portfolio or package amendment, and package migration

Customers can request Sales Admin to amend their portfolio or package (such as adding a new IMSI, adding a new zone, or changing the pricing) or migrate their SIMs to a different package.

Any changes made within a month, and their subsequent related charges, are backdated to midnight of the first of that month. For example, if you make a portfolio or package change on 10th August 2023 at 13h56, the invoice will display the change as occurring on 1st August 2023 at 00h00.

Package item amendment requests cut off

Package item amendment requests are processed until UK close of business on the 24th of each month, and will appear on the next invoice. For invoice processing purposes, all amendment requests that occur from the 25th of the month are not processed until the first working day of the following month.

Package migration requests cut off

Requests to migrate SIMs from one package to another are processed up until three days before the end of the month, and will appear on the next invoice. For invoice processing purposes, all package migration requests occurring within these three days are not processed until the first working day of the following month.

About SIM termination fees

You can terminate a SIM at any time. If you terminate a SIM that has a monthly or annual service charge, the following charges apply:

- If a SIM is still in contract, you are liable for the service charge to the end of that contract. You will receive a separate termination invoice with the remaining service charges in one lump sum, unless you have made a prior alternative arrangement with Accounts.
- If a SIM is no longer in contract, you may terminate it without incurring further service charges. The deactivated SIM may appear on the next bill to allow for any usage within the last month, prior to termination. SMS, data and voice overages are billed in arrears.

Service charges are non-refundable.

Termination is not instant – Eseye must first verify the termination.

Terminating a SIM is not the same as suspending a SIM. A suspended SIM will continue connecting to the network, and service charges will continue. However, you cannot use the SIM card in its suspended state. A terminated SIM cannot connect to the network.

For information about Eseye's standard terms and conditions, see [Standard Terms and Conditions](#).

SMS, data, and voice billing

Eseye differentiates between SMS, data, and voice billing:

- SMS – the number of SMS messages sent by a SIM
- Data – the mobile data used by a SIM
- Voice – the voice calls used by a SIM

Voice is no longer offered, as it is not required for M2M communication. Voice is included in this document for legacy reasons.

Usage is calculated within a calendar month, and billed in arrears.

For simplicity, SMS, data and voice charges are billed in priority zones, designed to provide standardised pricing across multinational regions. The zones are defined in your Service Contract and tailored for your use. Zone 1 often includes your countries of highest deployment. Where device deployment is required globally, further zones are tailored to group countries and networks with similar cost tariffs.

You can include the usage type in a bundle that you allocate to your SIM cards.

Understanding data usage per SIM

Use the CSV Invoice to understand how much data each SIM uses.

To view SIM data usage in the CSV Invoice:

1. Select the row containing the *ItemRefData* (Column A).
2. Navigate to *Description* (column H) to view a description of Data.
3. Total data usage in bytes = *Quantity* + *InBundleQuantity*, where:
Quantity (column K) is the number of excess (overage) bytes used
InBundleQuantity (column S) is the number of bytes used inside the bundled amount
4. For kilobytes, divide the total by 1024.
5. For megabytes, divide the total by 1048576.

Understanding SMS charges on the CSV invoice

Eseye may apply SMS charges for:

- Cellular network usage
- SMS API usage (subscription only)

The amount charged depends on your SIM contract and (if relevant) SMS API contract.

The following diagram displays the different transmission routes that can be charged.

The following table describes the transmission routes and typical charges.

Your specific charges will depend on your [service contract](#).

Transmission route	Description	Charges typically applied to
MO SMS	SMS originating from an AnyNet SIM and delivered to the AnyNet Messaging Service.	Originating SIM
MT SMS	SMS delivered to an AnyNet SIM from the AnyNet Messaging Service.	Destination SIM
SMS MO API	SMS delivered to a customer SMS application.	Customer SMS API
SMS MT API	SMS originating from customer SMS applications.	Customer SMS API

Transmission route	Description	Charges typically applied to
MO SMS EXT	SMS messages delivered to a third party SIM.	Originating SIM or Customer SMS API
N/A	SMS messages from third party SIMs to AnyNet SIMs or customer SMS applications.  SMS messages sent from 3rd party SIMs to other 3rd party SIMs are blocked and therefore not charged.	Destination SIM or Customer SMS API

SMS message charges on the SIM contract

Depending on your SIM contract, charges may apply for AnyNet SIM cellular network usage, which includes SMS messages and delivery receipts.

The SIM contract may have an agreed number of in-bundle SMS messages. You are not charged extra for these unless you use more than the agreed amount. For information about bundles, see *Understanding bundled usage* on the next page.

On the CSV invoice, the SMS charges for the SIM contract are shown against the relevant SIM number.

SMS message charges on the SMS API contract

If you subscribe to the SMS API service, the usage charges are agreed in the SMS API contract.

Your SMS API contract terms may differ from those on your SIM contract.

SMS API charges include:

- Incoming internet use of the AnyNet Messaging Service from the customer server.
- Sending or receiving SMS messages between the AnyNet Messaging Service and third party SIMs.

On the CSV invoice, the SMS API contract charges are totalled per package according to transmission type.

Understanding bundled usage

You can prepay monthly for SIM usage bundles, which will give you a better price for data or SMS usage than pay-as-you-go. Bundles are included in a SIM's monthly service charge. For example, a SIM may have a 250MB data bundle, where it can use up to 250MB of data a month before incurring further charges.

Any usage amount in excess of the bundle is known as the overage.

Voice is no longer offered, as it is not required for M2M communication. Voice is included in this document for legacy reasons.

On the CSV invoice, the following columns show the SIM usage:

- *Quantity* – bundle overage
- *Amount* – the overage cost
- *BundleQuantity* – total bundle allowance
- *InBundleQuantity* – usage amount within the bundle allowance

Late billed usage from a network operator will cause a bundle adjustment for the previous month. This is billed in arrears.

Understanding pooling

You must request pooling for your service contract.

If you have allocated bundles with your SIMs, you can request to accumulate them into a pool, where a set amount of service usage is shared across multiple SIMs. For example, five SIMs that are each on a 10 SMS bundle can be pooled to share the 50 SMS total between them. This means that if one SIM uses 5 SMSs, and another uses 15 SMSs, no overage is charged between them as they have pooled resources. If the five SIMs use more than the 50 SMSs allocated in the pool, you are charged for the overage (usage in excess of the pooled allowance). The overage is charged according to the *OutOfBundle* tariff listed on your contract.

A pooled usage line is only listed at the bottom of an invoice when there is an overage.

Pooling only applies when it is set up for specific services on your service contract. For example, it might apply to data but not SMS messages.

On your CSV invoice, the pool type is identified using the *ItemRef*, *PackageID* and *PackageItemID*.

If a SIM is pooled, its usage is recorded against the individual SIM, but any associated costs are calculated against the pooled allowance.

If a pooled usage line appears on the CSV invoice, the following columns show the pooled usage:

- *Quantity* – pooled allowance overage
- *Amount* – the overage cost
- *BundleQuantity* – total pooled allowance
- *InBundleQuantity* – usage amount within the pooled allowance

Late billed usage will not cause a recalculation of pooled data.

INVOICE

The invoice summary. We recommend you print the first page for your records.

Invoice Date	Invoice Number	Customer PO Reference	Customer VAT Number
<Invoice date>, for example 01/11/2020 The invoice includes all charges up until (but not including) this date.	<Unique reference number>	<Related customer Purchase Order number>	<VAT ID>

Eseye Ltd
20 Nugent Road
Surrey Research Park
Guildford
GU2 7AF, UK

Invoice To:	Ship To:
Business/Customer name Customer address	Provided if different from the invoice name and address.

Mobile Connectivity Service	
Connections Under Management	The total number of SIM cards billed on this invoice, including: - All active SIM cards. - All suspended SIM cards (for which the service charge continues). - SIM cards terminated in the last month (allows for any usage within the month before termination, as Data, SMS, and Voice charges are billed in arrears).

Invoice Items	Invoice Amount	Invoice VAT
Service Charges	Total for all SIM cards in currency agreed on contract.	VAT per item.
Data Charges	Total data charges for all SIM cards; only listed if one or more SIMs have data charges.	
Messaging Charges	Total messaging charges for all SIM cards; only listed if one or more SIMs have SMS Charges.	
Calls Charges	Total calls charges for all SIM cards; only listed if one or more SIMs have Voice charges.

Eseye PDF Invoice Example

Usage in excess where there is pooled bundle allowance

The following section appears after the SIM card list, if pooled usage is applied to the current invoice. Data, SMS, or Voice charges are listed if usage is in excess of the pooled allowance. You can see further details for each listing in the accompanying CSV file, for example: which package the charge was made against.

Data Charges (Pooled data charge example)		
Zone 1 Data - 1.14GB in excess of 40MB bundle	Period 01/10/2020 through 31/10/2020	\$ 11.68
Connection Total		\$ 11.68
Data Charges		
Zone 1 Data - 37.6MB in excess of 3.59GB bundle	Period 01/10/2020 through 31/10/2020	\$ 7.53
Connection Total		\$ 7.53

For monthly billing, each SIM card is charged for Service in advance. If the SIM card was activated within the last month, a partial pro rata Service charge covering the initial activation period is also included, and billed in arrears.								
For annual billing, each SIM card is charged for Service in advance.								
Data, SMS, and Voice are billed in arrears.								
In the example above, each SIM card is grouped with grey or white shading to help you understand that a SIM card might have multiple package items charged against it. Shading is not applied in the CSV invoice.
